EDUCATION

University of Maryland College Park, MD
B.S. Computer Science (Machine Learning Track) Expected: May 2028
GPA: 3.66/4.00
Honors: President's Scholarship, Dean's List, DECA International Top 10 Finalist, National Merit Commended Scholar
Relevant Coursework: Computer Systems, Data Structures, Discrete Structures, Statistics, Linear Algebra

TECHNICAL SKILLS

Programming Languages: Python, Java, TypeScript, JavaScript, SQL, C, HTML, CSS
Frameworks & Backend: React, Next.js, Node.js, FastAPI, Spring Boot, Flask, Prisma, REST APIs, JUnit
Databases & Data: PostgreSQL, MongoDB, SQLite, NumPy, Pandas
AI & Machine Learning: LLMs, OpenAI/Claude/Gemini APIs, LangChain, RAG, OpenCV, CNNs
Cloud & DevOps: AWS (EC2, S3, IAM, RDS), Git, Docker, GitHub Actions, CI/CD, Vercel
Languages: English (Native), Hindi (Native), Spanish (Proficient)

EXPERIENCE

FutureReady College & Career Prep – Founder & Software Developer May 2026 – Present
- Founded and built a college admissions platform using React, TypeScript, Vite, and Vercel, developing reusable React components, responsive user interfaces, and client-side routing; increased monthly active users by 445% through SEO and organic acquisition.
- Developed and implemented a weighted college-matching algorithm that evaluates 80+ universities against a student's academic profile, using GPA, SAT, intended major, location, and budget to generate personalized reach, target, and likely recommendations.

TinyMedic – Software Engineering Intern Summer 2025
- Collaborated with senior engineers at TinyMedic, a healthcare technology startup, to develop patient portal interfaces and front-end components using HTML, CSS, and JavaScript, enabling patients across 100+ rural hospitals to securely access medical records.
- Contributed Spring Boot REST API endpoints for patient lab results and medication records, following the team's controller/service architecture and DTO conventions to securely expose patient data to frontend components.

TECHNICAL PROJECTS

JobzTracker — AI-Powered Job Application Platform April 2026 – Present
- Developed a scalable full-stack job application platform using Next.js, TypeScript, Prisma, and PostgreSQL, featuring secure authentication, a Chrome extension for one-click job capture, and dual local (SQLite) and cloud deployment architectures.
- Engineered a modular AI document pipeline supporting OpenAI and Gemini to generate tailored resumes and cover letters, implementing provider abstraction, DOCX style extraction, and Amazon S3 storage while preserving original document formatting.
- Architected a production-ready application with Docker, GitHub Actions for CI/CD, and environment-based configuration, enabling consistent local development, cloud deployment, and maintainable feature expansion.

LabLens AI — Personalized Health Intelligence Platform Dec 2025 – May 2026
- Built a full-stack health intelligence platform using Next.js, integrating Claude, Clerk, and Supabase to analyze lab results and generate personalized health insights, action plans, and follow-up recommendations.
- Engineered a context-aware AI pipeline that combines user health profiles, lifestyle data, and historical biomarkers to deliver longitudinal trend analysis and personalized recommendations.

RAG Chatbot — Document Q&A with Local and Cloud LLMs March 2026 – Present
- Implemented a Python RAG chatbot using LangChain and ChromaDB to ingest PDF and text documents, retrieve relevant context, and generate grounded answers through either local (Ollama) or cloud (Claude) LLMs.
- Containerized and deployed the application with Docker, Railway, and GitHub Actions, and added configurable provider switching, persistent vector storage, and basic retrieval evaluation.

PUBLICATIONS

Chessboard State Detection Using Computer Vision July 2024
- Built a computer vision pipeline for chessboard localization and piece recognition using Python, OpenCV, RANSAC, and CNN classifiers — published in the *Research Archive of Rising Scholars* (DOI: 10.58445/rars.1270).

LEADERSHIP & PRODUCT EXPERIENCE

Product Space @ UMD — Director of Professional Development Oct 2025 – Present
- Led workshops, speaker sessions, and networking events for UMD's chapter of a national product management organization.
- Conducted user research and recommended features for SpotterAI, a live iOS/Android AI fitness app, informing product roadmap.

Issaquah Schools Foundation — Student Trustee, Executive Board Aug 2023 – Jun 2025
- Represented 18,000+ students on the executive board of a district nonprofit, translating student insights into $1M+ in funding recommendations and delivering monthly impact reports to the board of trustees and superintendent.
